- SEO

## PROJECTS

- **Blog Website (Live Project)**

**Technologies:** HTML, CSS, PHP, MySQL

**Description:** Developed a dynamic blogging platform for publishing, editing, and managing articles with a secure admin panel. The system includes user authentication, category management, and a responsive interface for smooth content browsing and administration.

**Key Points:**

1. Implemented CRUD functionality for posts, categories, and users.
2. Integrated secure login system using PHP sessions.
3. Designed a mobile-responsive UI using HTML & CSS.
4. Structured database using MySQL for efficient content storage.
5. Added search, filter, and category-wise article display.
6. Created an admin dashboard for real-time content management.

**My Contribution:**

1. Developed the complete frontend using HTML5 and CSS3.
2. Designed and implemented the entire Categories Section UI using HTML & CSS.

**Website Link:** <https://looplane.in>

- **Employee Management Systems (Academic Project)**

**Technologies:** HTML, CSS, PHP, MySQL

**Description:** Designed and developed a dynamic system to manage employee data and streamline organizational operations.

**Key Points:**

1. Implemented CRUD operations for employee data (add, update, delete, view).
2. Built responsive frontend layouts using HTML & CSS.
3. Created secure data handling using PHP and MySQL.
4. Integrated search and filter functionalities for quick data lookup.
5. Designed a structured database for efficient employee management.
6. Developed user-friendly forms for employee entry and updates

**My Contribution:**

1. Designed frontend pages using HTML5 and CSS3.
2. Developed backend logic in PHP for employee management
3. Created the complete MySQL database schema (employees table, etc.)

**Website Link:** <https://ems.anindita.online>

- **ECommerce Website (Academic Project-Ongoing)**

**Technologies:** HTML, CSS, Bootstrap, JavaScript PHP, MySQL

**Description:** Developed e-commerce web application with user authentication, product management, and shopping cart features.

**Key Points:**

1. Implemented user registration, login, and session-based authentication.
2. Designed product listing, product details, and category-wise filtering.
3. Integrated shopping cart functionality using PHP and JavaScript
4. Developed responsive UI with HTML, CSS, and Bootstrap.
5. Created MySQL database structure for products, users, and orders.
6. Added search feature, product quantity update, and cart management.

**My Contribution:**

1. Fully implemented and developed the entire project independently
2. Designed all frontend pages using HTML, CSS, Bootstrap
3. Built core backend logic in PHP for authentication, cart, and product management
